## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art (APA) in view of Yamane (JP 9-147615).

The APA discloses in fig. 5 a liquid crystal display device including an under light type back light unit in which light emitted from a plurality of linear light sources 4 is reflected by a reflecting sheet 5 disposed at a rear side of the plurality of linear light sources, then transmitted through a light modulation film 9 and a light diffusion plate 7 to form a planar light source with a first uniform luminance thereby to indirectly irradiating a first portion of a liquid crystal panel 8 from a rear side thereof, but omits a light source shielded by a light shield.

Yamane discloses (see figs. 2 and abstract) a light emitted from a linear light source 3 shielded by a light shielding plate 4 and transmitted only through a guiding plate, which is capable of irradiating a second portion of a panel from a rear sidethereof with a luminance higher than a first luminance.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate the teachings of Yamane with the APA, since that would raise brightness at upper surface of a plate as taught by Yamane.
